Draft claim amendment – Application No. 10/064,751

1. (Currently Amended) An application editing apparatus for using a computer to edit an application having a model and a view separated from each other, comprising:

- a computer readable storage medium;
- an editing module for editing a first model in said application;
- a model converter for receiving automatically a report of an update to the first model and converting the first model edited by said editing module into a second model, said first model using a view of said second model different from a view of said first model, and said first model not supporting the view of said second model, said second model associated with a different application from said application; and
- a view display module for using a view of said second model to display said second model on a display device;

wherein said view display module comprises an event generator for generating an event based on an update in said second model if said second model is updated based on an edit of said first model made by said editing module and updates changed portion of the view displayed on said display device based on the event generated by said event generator, wherein the event based on the update in said second model is processed by a markup language processor.

Independent claims 6, 7, 12 and 15 to include similar amendment.
